

## SOYA CONTRACTS FOR SPRING 2020

### **Soya is now a commercial reality in the UK.**

With around 5000 acres of soya being grown in the UK in 2019, and with soya prospects looking good for next year, we hope to place a significantly increased acreage in 2020.

### **There are 3 contracts to choose from:**

#### ■ **Seed Production Contracts**

We are always looking for arable growers with good storage and drying facilities to produce seed for us. Seed production contracts pay a £40 over the Hard IP value with a guaranteed minimum of £400 per tonne.

#### ■ **Hard Identity Preserved Soya Contracts**

Our main commercial contract is the Hard IP (identity Preserved) contract. This means that growers with traceability / farm assurance (eg Red Tractor) can grow for the I.P market and secure a decent premium over the commercial market. UK Hard IP soya beans are now established as an equivalent product to Canadian Hard IP beans, and the Hard IP contract generates the necessary Non-GMO chain of assurance.

#### ■ **Organic**

There is a very strong organic market for UK grown organic Soya. We offer organic growers a min / max contract priced at £500 / £700 per tonne.

### **Soya UK - Advice and Choice:**

#### ■ **Agronomy Advice**

Full agronomy advice throughout the growing season, with regular bulletins to keep you informed.

#### ■ **Best Choice of Soya Varieties**

We offer the most up-to-date and best choice of Soya varieties available in the UK. This is the result of many years of trials work both here in the UK and across Europe.

Soya UK varieties have a number of beneficial features in terms of plant architecture, ease of harvest, earliness, and adaptation to UK latitudes. This is incredibly important for growing soya in the UK where earliness and harvestability are key to being able to grow the crop.

#### ■ **Pre-inoculated Seed**

Since 2008, we have been able to exclusively offer the only UK system for the pre-inoculation of the soya seed. All of our seed now comes ready-inoculated.
